

b) retrieving flight information from the signal conversion database;

c) sorting retrieved flight information into a desired sequence;

d) articulating sequenced flight information;

e) articulating standardized opening messages;

f) determining an end program sequence termination request; and

g) verifying that the flight information is current before storing the flight information in the signal conversion database.

12. The computer-readable medium of claim 11, wherein determining an end program sequence termination request comprises:

determining whether a designated key has been depressed; and

terminating performance of the method based on a determination that the designated key has been depressed.

13. The computer-readable medium of claim 12, wherein the step of verifying that the flight information is current comprises the substeps of:

determining whether flight information has been received from a flight information file server within a predetermined period of time;

establishing communications with the flight information file server based on a determination that flight information has not been received within a predetermined period of time; and

performing steps a) through g).
